ATHARVA WARANKAR

Software Engineer

Pune, Maharashtra, India | +91-8788804391 | atharva.workx@gmail.com | atharva-warankar-portfolio.vercel.app | linkedin.com/in/atharvaw01 | github.com/atharvaworkx

PROFESSIONAL EXPERIENCE

Atomic Loops, Backend Engineer (Intern) *Pune, India | Aug 2025 to Mar 2026*

HR AI Platform (Ritz Carlton) and Takenaka Corporation (Japan)

- Designed and integrated internal and third-party application workflows using **AWS S3 and FFmpeg**, building distributed media pipelines that supported **500+ concurrent interview sessions** with reliable production throughput.
- Built **AI-driven data integration pipelines** combining structured data extraction with backend processing to parse and route resume and portfolio data, improving shortlisting efficiency by **30%**.
- **Engineered secure data exchange and authentication layers** connecting internal services with a production inspection system, enabling reliable integration across a platform processing **7,000+ items per day**.
- Drove architecture and design decisions for event-driven processing flows handling real-time validation and defect detection, decomposing monolithic logic into modular services to strengthen reliability.
- Developed automated, well-tested reporting pipelines that transform raw processing outputs into structured evaluation data, reducing manual review effort and improving reviewer turnaround.
- **Collaborated with cross-functional engineering teams** to deploy and maintain production systems, identifying and resolving technical bottlenecks under high-concurrency workloads.

Sunsys Technologies, Software Engineer (Intern) *Bangalore, India (Remote) | Feb 2025 to Jul 2025*

- **Led design and application integration** of a modular task management platform, connecting backend services, database layer, and REST APIs into a unified architecture.
- **Integrated third-party APIs and internal services** through secure REST endpoints for reliable cross-system data exchange.
- Refined SQL queries and enhanced data pipelines, leading to a **25% decrease in data retrieval times** under heavy production workloads.
- Translated business requirements into technical implementation plans, collaborating with cross-functional teams across Agile sprints to deliver features on schedule.
- Supported testing, deployment, and post-release stability, addressing defects and performance issues to maintain production reliability.

SELECTED PROJECTS

Relay: Agentic Integration Platform for Salesforce & Enterprise Systems

- Architected an **event-driven integration platform** connecting Salesforce with internal/third-party services (customer, order, logistics APIs) through a centralized integration gateway, decoupling Salesforce from direct backend dependencies.
- Designed an **agentic orchestration layer** where an AI agent dynamically selects and executes enterprise tools (get_customer, get_order, update_case) based on workflow state to resolve Salesforce cases end to end.
- Implemented secure, **OAuth-based data exchange** with role/permission-based access control and full audit logging; built a policy engine routing high-risk agent actions to human approval.
- Engineered **reliability patterns** (idempotency, retries, dead-letter handling, circuit breaking) and deployed on **AWS** with containerized services, PostgreSQL, and Redis, backed by unit, integration, and failure-mode tests.

AyuPilot: AI Driven Diagnostic Integration Platform

- Designed a system integration architecture using **Django REST Framework and PostgreSQL**, connecting multimodal image inputs (nail, iris, hair, skin) with AI-assisted diagnostic processing and structured report generation.
- Built event-driven, asynchronous data pipelines with **Celery, RabbitMQ, and Redis** to process diagnostic workloads at scale, containerizing the system with **Docker** for consistent cloud-ready deployment.
- Engineered secure backend data models and data exchange flows for patient management, image-based assessments, and longitudinal health tracking.
- Implemented AI API integration between image processing, inference, and report generation layers to deliver structured, personalized wellness recommendations end to end.

TECHNICAL SKILLS

- **Languages:** Python, Java, C++, C
- **Backend & APIs:** Django, Django REST Framework, REST APIs, Microservices, API Design
- **Data & Integration:** PostgreSQL, Redis, RabbitMQ, Celery, Data Pipelines, System Integration
- **Cloud & DevOps:** AWS S3, Docker, Cloud Deployment, Railway, Vercel
- **AI Integration:** AI API Integration, AI-Assisted Data Processing, Structured Data Extraction, Agentic Orchestration
- **Additional Exposure:** React, Flutter (feature development and prototyping)
- **Engineering:** Distributed Systems, Asynchronous Processing, Authentication, Agile

EDUCATION

B.C.A. (Bachelor of Computer Applications), MIT Arts, Commerce and Science College, Alandi, Pune 2023 to 2026

CGPA: 8.04 / 10
